

# Latent Growth Models

## A Course in MplusAutomation

*Adam Garber*

---

### Lesson 10 preparation

---

#### Data sources:

1. The first 3 models utilize a public use data subset the *Longitudinal Survey of American Youth (LSAY)*  
[See documentation here](#)
  2. The 4th model utilizes a public use data subset the *High School Longitudinal Study (HSLs)*  
[See documentation here](#)
- 

Load packages

```
library(gganimate)
library(tidyverse)
library(haven)
library(janitor)
library(MplusAutomation)
library(rhdf5)
library(here)
library(gt)
library(gtsummary)
library(semPlot)
```

---

### LSAY data example - Math Scores across 6 timepoints

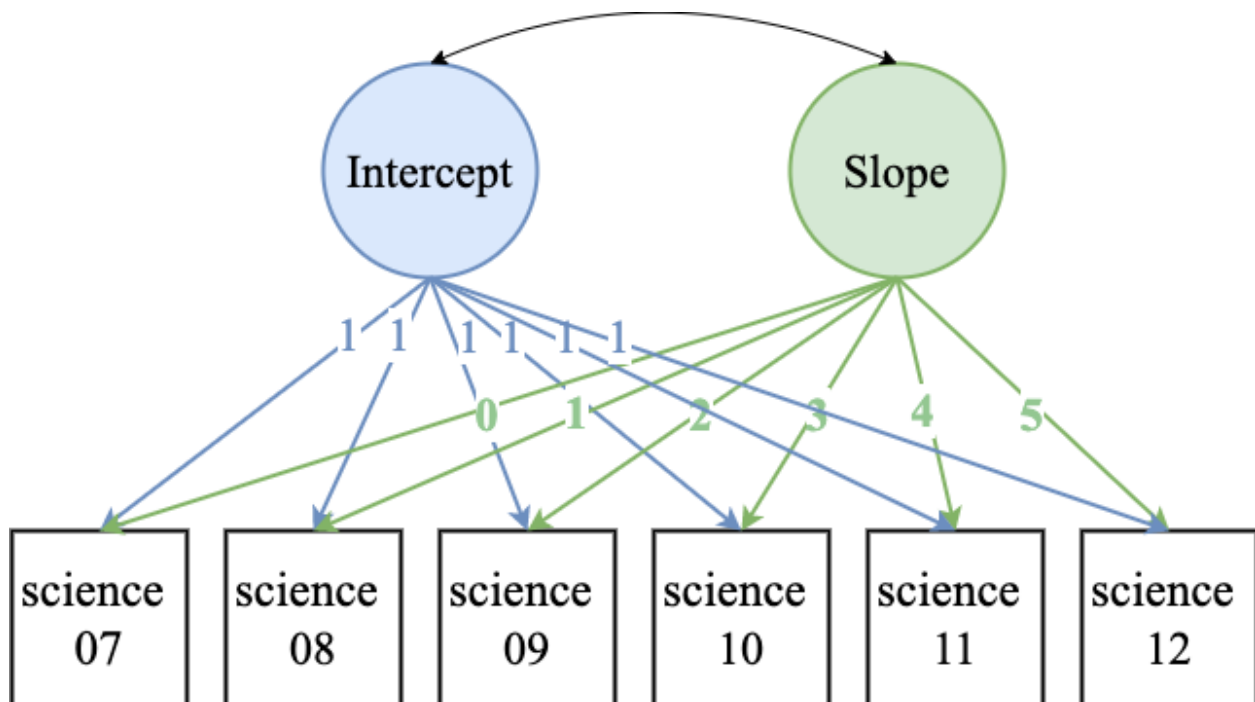

---

Read in the CSV file

```
lsay <- read_csv("https://garberadamc.github.io/project-site/data/lsay_lab6_data.csv")
```

Take a look at LSAY repeated measures

Name	Labels
math_07	7th grade math score
math_08	8th grade math score
math_09	9th grade math score
math_10	10th grade math score
math_11	11th grade math score
math_12	12th grade math score

Model 1 - Latent growth model with fixed time effects (equal intervals)

```
m1_growth <- mplusObject(
  TITLE = "m1 growth model fixed time scores",
```

```

VARIABLE =
  "usevar =
    math_07-math_12; ",

ANALYSIS =
  "estimator = ML" ,

MODEL =
  "i s | math_07@0 math_08@1 math_09@2 math_10@3 math_11@4 math_12@5; " ,

OUTPUT = "sampstat standardized;",

PLOT = "type=plot3;
        series = math_07-math_12(*)",

usevariables = colnames(lsay),
rdata = lsay)

m1_growth_fit <- mplusModeler(m1_growth,
                             dataout=here("10-growth-models", "mplus_files", "lsay.dat"),
                             modelout=here("10-growth-models", "mplus_files", "m1_growth_lsay.inp"),
                             check=TRUE, run = TRUE, hashfilename = FALSE)

```

---

Load in the mplus.R functions

```
source(here("10-growth-models", "mplus.R.txt"))
```

```
## [1] "Loaded rhdf5 package"
```

## Plotting using gh5 plot data generated by Mplus

1. View plots available for a given model
2. Generate plots using the `get.plot.---` function
3. Extract data and transform to tidy format
4. Plot with `ggplot`

```
mplus.view.plots(here("10-growth-models", "mplus_files", "m1_growth_lsay.gh5"))
```

Prepare plot data

```

observed <- lsay %>%
  select(starts_with("math")) %>%
  rownames_to_column() %>%
  drop_na()

obs100 <- observed[1:100,]

plot_obs <- obs100 %>%

```

```

pivot_longer(`math_07`:`math_12`, # The columns I'm gathering together
             names_to = "grade", # new column name for existing names
             values_to = "value") # new column name to store values

gradelevels <- colnames(observed[,2:7])

mean_est <- as.data.frame(
  mplus.get.estimated_means(here("10-growth-models", "mplus_files", "m1_growth_lsay.gh5"))) %>%
  mutate(grade = gradelevels)

```

Plot the model estimated means superimposed on the observed individual values

```

growth_plot <- ggplot() +
  geom_point(data = plot_obs, aes(x = grade, y = value, group = rowname), alpha = .3) +
  geom_line(data = plot_obs, aes(x = grade, y = value, group = rowname), alpha = .3) +
  geom_point(data = mean_est, aes(x = grade, y = V1, color = "Blue", size = 1.5)) +
  geom_line(data = mean_est, aes(x = grade, y = V1, group = 1), color = "Blue", size = 1.2) +
  scale_x_discrete(labels = c("7", "8", "9", "10", "11", "12")) +
  labs(x = "Grade", y = "Math Score") +
  theme_minimal()

growth_plot

```

```

ggsave(here("10-growth-models", "figures", "spaghetti_p1.png"),
        height = 6, width = 8, dpi = "retina")

```

Animate the plot with {gganimate}

```
growth_plot +  
  transition_states(rowname, transition_length = 1, state_length = 1) +  
  shadow_mark(color = "Magenta", alpha = .3)
```

```
anim_save(here("10-growth-models", "figures", "spaghetti_plot.gif"),  
          height = 6, width = 8, dpi = "retina")
```

---

## Model 2 - Latent growth model with freely estimated time scores (level-shape model or latent basis model)

---

```
m2_growth <- mplusObject(  
  TITLE = "m2 growth model freely estimated time scores",  
  VARIABLE =  
    "usevar =  
    math_07-math_12; ",  
  
  ANALYSIS =  
    "estimator = ML" ,  
  
  MODEL =  
    "i s | math_07@0 math_08@1 math_09* math_10* math_11* math_12*; " ,  
  
  OUTPUT = "sampstat standardized;",  
  
  PLOT = "type=plot3;  
          series = math_07-math_12(*)",  
  
  usevariables = colnames(lsay),  
  rdata = lsay)  
  
m2_growth_fit <- mplusModeler(m2_growth,  
                              dataout=here("10-growth-models", "mplus_files", "lsay.dat"),  
                              modelout=here("10-growth-models", "mplus_files", "m2_growth_lsay.inp"),  
                              check=TRUE, run = TRUE, hashfilename = FALSE)
```

---

Prepare plot data

```
mean_est2 <- as.data.frame(  
  mplus.get.estimated_means(here("10-growth-models", "mplus_files", "m2_growth_lsay.gh5"))) %>%  
  mutate(grade = gradelevels)
```

Plot the model estimated means superimposed on the observed individual values

```
growth_plot <- ggplot() +  
  geom_point(data = plot_obs, aes(x = grade, y = value, group = rowname),  
            color = "lightblue", alpha = .3) +  
  geom_line(data = plot_obs, aes(x = grade, y = value, group = rowname),  
           color = "lightblue", alpha = .3) +  
  geom_point(data=mean_est2, aes(x=grade, y = V1), color = "magenta", size = 1.5) +  
  geom_line(data=mean_est2, aes(x=grade, y = V1, group = 1), color = "magenta", size = 1.2) +  
  scale_x_discrete(labels = c("7", "8", "9", "10", "11", "12")) +  
  labs(x="Grade", y="Math Score") +  
  theme_minimal()
```

growth\_plot

**Model 3 - Latent growth model with covariate and freely estimated time scores**

---

```

m3_growth <- mplusObject(
  TITLE = "m3 growth model with covariate and freely estimated time scores",
  VARIABLE =
    "usevar =
      math_07-math_12 fathed; ",

  ANALYSIS =
    "estimator = ML" ,

  DEFINE = "center fathed (grandmean);",

  MODEL =
    "i s | math_07@0 math_08@1 math_09* math_10* math_11* math_12*;
      i s on fathed; " ,

  OUTPUT = "sampstat standardized;",

  PLOT = "type=plot3;
          series = math_07-math_12(*)",

  usevariables = colnames(lsay),
  rdata = lsay)

m3_growth_fit <- mplusModeler(m3_growth,
  dataout=here("10-growth-models", "mplus_files", "lsay.dat"),
  modelout=here("10-growth-models", "mplus_files", "m3_growth_lsay.inp"),
  check=TRUE, run = TRUE, hashfilename = FALSE)

```

---

Check the path diagram of the model with {semPlot}

```

m3_output <- readModels(here("10-growth-models", "mplus_files", "m3_growth_lsay.out"))

```

```

## Reading model: /Users/agarber/github/Quant-Fish-END/10-growth-models/mplus_files/m3_growth_lsay.out

```

```

semPaths(m3_output, "est",
  intercepts=FALSE, residuals = FALSE, fade = FALSE,
  edge.color = "black", edgeLabels = "")

```

---

## HSLs data example - Academic expectations

---

```
hsls_rep <- read_csv(here("10-growth-models", "data", "hsls_rep_lab6.csv"))
```

---

Table. HSLs repeated measures

Question stem - Highest level of education expected...

Name	Labels	Levels
s1eduexp	9th grade (2009)	1 = less HS, 2 = HS, 3 = Bach, 5 = Master, 6 = Ph.D
s2eduexp	11th grade (2012)	1 = less HS, 2 = HS, 3 = Bach, 5 = Master, 6 = Ph.D
s4eduexp	3 years post high school (2016)	1 = less HS, 2 = HS, 3 = Bach, 5 = Master, 6 = Ph.D

---

## Model 4 - Latent growth model with categorical outcomes

---

```

m4_growth <- mplusObject(
  TITLE = "m4 growth model - HSLS ",
  VARIABLE =
    "usevar = s1eduexp-s4eduexp;
    categorical = s1eduexp-s4eduexp; !!! key difference !!!",
  ANALYSIS = "" ,
  MODEL =
    "! 0=09 1=10 2=11 3=12 | 4=13 5=14 6=15 7=16
    i s | s1eduexp@0 s2eduexp@3 s4eduexp@7; ",
  OUTPUT = "sampstat standardized;",
  PLOT = "type=plot3;
    series = s1eduexp-s4eduexp(*)";,
  usevariables = colnames(hsls_rep),
  rdata = hsls_rep)

m4_growth_fit <- mplusModeler(m4_growth,
  dataout=here("10-growth-models", "mplus_files", "hsls_rep.dat"),
  modelout=here("10-growth-models", "mplus_files", "m4_growth_hsls.inp"),
  check=TRUE, run = TRUE, hashfilename = FALSE)

```

---

Prepare plot data

```

loop_data <- lapply(1:6, function(k) {
  probs <- mplus.get.estimated_probabilities(
    here("10-growth-models", "mplus_files", "m4_growth_hsls.gh5"), 'process1', k, k)

  loop_data <- as.data.frame(probs) %>%
    mutate(cat = factor(k))
})

plot_data <- bind_rows(loop_data)

observed <- hsls_rep %>% select(contains("eduexp")) %>%
  rownames_to_column() %>% drop_na()

obs100 <- observed[1:100,]

plot_obs <- obs100 %>%
  pivot_longer(`s1eduexp`:`s4eduexp`, # The columns I'm gathering together
    names_to = "year", # new column name for existing names

```

```

      values_to = "value") %>%      # new column name to store values
mutate(year = case_when(
  year == "s1eduexp" ~ 1,
  year == "s2eduexp" ~ 2,
  year == "s4eduexp" ~ 3,
))

yearlevels <- colnames(observed[,2:4])

prob_est <- plot_data %>%
  mutate(year = rep(1:3, 6))

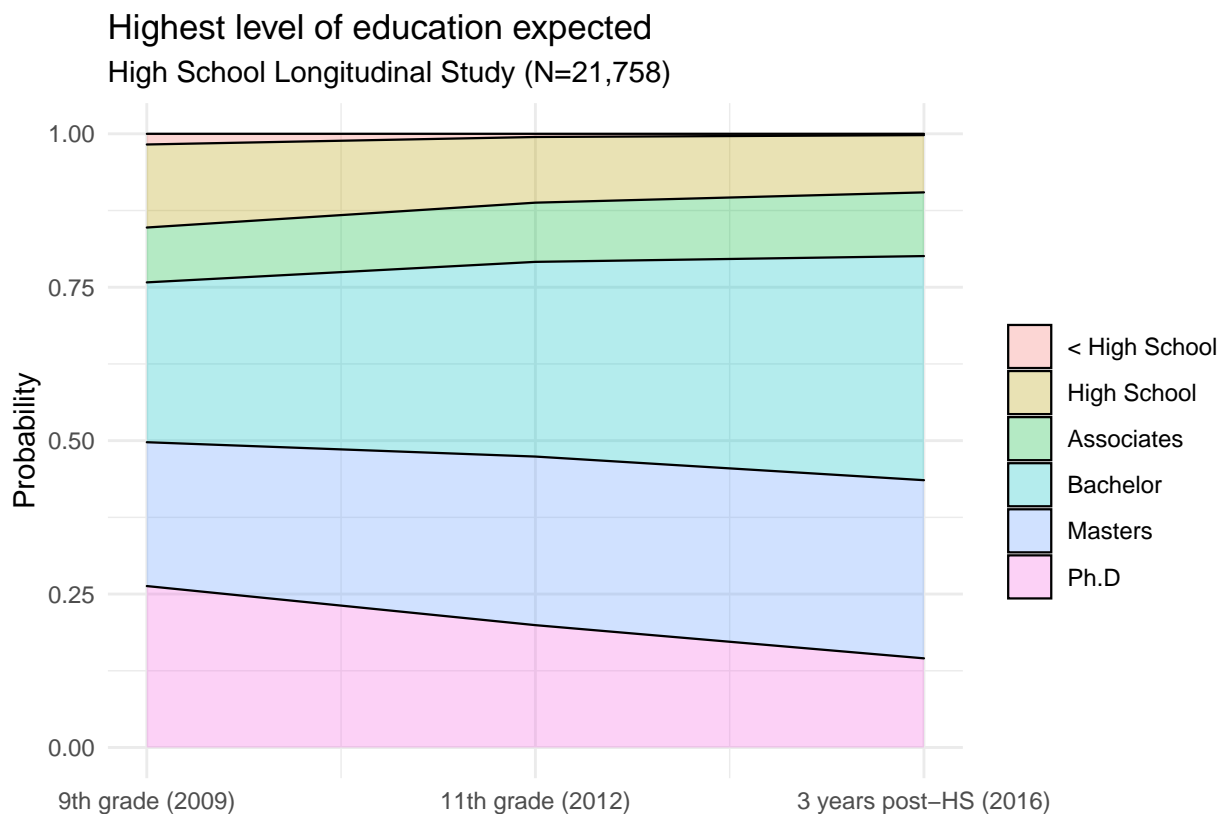

```

Plot the model estimated probabilities (categorical outcomes)

```

ggplot(data=prob_est, aes(x=year, y=V1, fill=cat)) +
  geom_area(alpha=0.3, size=.4, colour="black") +
  scale_x_continuous(breaks = 1:3,
    labels = c("9th grade (2009)", "11th grade (2012)", "3 years post-HS (2016)")) +
  scale_y_continuous("Probability") +
  scale_fill_discrete("",
    labels = c("< High School", "High School", "Associates", "Bachelor", "Masters", "Ph.D")) +
  labs(title="Highest level of education expected",
    subtitle = "High School Longitudinal Study (N=21,758)", y="Probability", x="") +
  theme_minimal()

```

```
ggsave(here("10-growth-models", "figures", "cat_growth_plot.png"),
       height = 6, width = 8, dpi = "retina")
```

Create an animated plot with {gganimate}

```
cat_plot <- ggplot(data = plot_obs, aes(x = year, y = value, group = rowname)) +
  geom_jitter(color = "black", alpha = 0, width = 0.1, height = .3) +
  geom_line(color = "black") +
  scale_x_continuous(breaks = 1:3,
    labels = c("9th grade (2009)", "11th grade (2012)", "3 years post-HS (2016)")) +
  scale_y_reverse(breaks = 1:6, labels = c("< HS", "HS", "AA", "BA/BS", "MA", "Ph.D")) +
  theme_minimal() + theme(panel.grid.minor = element_blank()) +
  labs(y="", title="Highest level of education expected",
    subtitle = "High School Longitudinal Study (N=100, sub-sample)")

cat_plot + transition_states(rowname, transition_length = 3, state_length = 3) +
  shadow_mark(color = "blue", alpha = .15)
```

```
anim_save(here("10-growth-models", "figures", "cat_growth_anim.gif"),
          height = 6, width = 8, dpi = "retina")
```
